

## Waste Management

- Waste management is an important element of environmental protection. Our institution is committed towards the protection of environment. Hence we have a proper mechanism related to waste management.
- As a part of our policy we are marching ahead towards the paperless office by reducing the use of papers. Instead of using hard copies of various documents; we are using soft copies for documentation. Also one sided used papers are reused if possible.
- Two buckets are kept in the college for separate disposal of wet waste and dry waste.
- This separated waste we use as a compost for a plants in college.

### **Clean Campus**

#### **E-Waste Management –**

The E - waste is collected and segregated and sent offsite for safe disposal. Old CDs are used for making wall hangings and decorative items by the students and shared with the schools.

### Use of Rainwater –

- The rain water collected on terrace is collected through pipeline from top in water tank which is at the basement of building.
- This collected water is used for plants in the campus.
- This is the best waste management of water.

## Vermicompost –

In our college the waste material is also used to make a vermicompost .
