3.1.4. Report of innovations tried out and ideas Incubated

Different modules of Lesson plans are experimented at school level and a standardized format is followed to teach CAM model, Inquiry model, Programmed instruction, value based, multiple intelligence lesson and many more in the list. The ideas incubated from all the above innovations are the critical thinking, creative efforts of blending art and theatre into the school content, Value of universal harmony and consciousness, elements of individual differences in an inclusive classroom, blended learning through ICT and so on. Steam based lesson are encouraged to connect Science and art through inter twinning them through visual and performing arts. This ideates imagination, ecstasy and happiness in the teaching – learning process.

Student teachers are taken through a situational analysis approach in teaching the concept like banking as a field visit to the bank and this idea creates interest and concrete learning. This makes the student teachers as reflective practitioners.

The assessment rubrics prepared and administered are preliminary sources exposing the student teachers to understand the criteria of the specific learning behavior expected out of each student. They get an insight into planning their projects; design their Programme of Action and presentation strategies.
